California College of the Arts - Jewelry Designer UG - Oakland, CA

Centro Universitário de João Pessoa - Fashion Designer BA, emphasis in marketing - Brazil

Universidade Federal da Paraíba - History BA, emphasis in history of arts - Brazil

Additional:

I'm a JavaScript Full-stack developer, with experience on Agile workflow, system architecture and test-driven development. The main focus of my education and professional experience is to be ready to learn and implement new technologies on the go, and that is why I'm confident I can be a great addition to the software engineer team. I believe that my unique design background brings a powerful complement to the mix. My brain is definitely detail-oriented and I have a creative mindset and great soft skills that have proven very helpful in extremely stressful situations and on everyday challenges. I also ran a jewelry business on my own for 3+ years giving me extensive experience on wearing multiple hats and getting things done. I just need an opportunity to prove my skills, qualities and hard working personality.

About me:

* I have been designing and creating jewelry for at least ten years and it's one of my passions. I enjoy the creativity of the design process mixed with the dedication to details and the opportunity to master new techniques. I believe that my experiences as a designer can be of great complement to my technical skills as a software engineer.

* An important part of my life is dedicated to social justice. I have participated in a number of volunteer projects and am always on the lookout to find ways to educate people around me. Sexism and sexual harassment are the main focus of my attention and I strive to gain education on many other areas in the social justice movement.

* I am from Brazil and I moved to the USA eight years ago. I have grown up in a different culture and that gives me a great perspective on how to interact with people of all sorts of upbringings and backgrounds.

* I am a very active person and enjoy white water kayaking, highlining, backpacking, and mountain biking. I also am an instructor of AcroYoga, which is an acrobatic practice that combines balance, strength, creativity, and fun with trust and confidence.
